

**DONALD C. TILLMAN WATER RECLAMATION PLANT**  
LOS ANGELES, CALIFORNIA  
A. J. LUMSDEN for DMJM

CLIENT: Department of Public Works, City of Los Angeles  
CONTACT: Robert S. Birk- Chief City Engineer  
Los Angeles, California 90014  
818.756.8175

COMPLETION: 1999 (Currently undergoing addition design)

DESCRIPTION: The Donald C. Tillman Water Reclamation Plant was designed to produce reclaimed water that will meet the requirements of the California Department of Health Services and the County Health Department for specific uses with the priority to protect public health. The plant capacity was developed in five increments of 40 million gallons per day (mgd) each for an ultimate capacity of 200 mgd. The contextual relationship of the architecture and landscape was very significant since the plant is located in a major suburban area, a 90 acre site in the Sepulveda Flood Control Basin. The administration building, along with the Japanese garden occupies the western part of the site, provides 15,000 square feet of offices and laboratories and 5,000 square feet of display area.

COST: \$ 200 million

ROLE: As former Design Principal for DMJM, Anthony Lumsden was in charge of architectural design.

STATUS: Project is built and Anthony Lumsden has been assisting the Department of Engineers with the design of an addition.
