

PLEASANT HILL HOUSING REDEVELOPMENT - PLEASANT HILL, CA

CLIENT: City of Pleasant Hill
 COMPLETION: 2001

DESCRIPTION: This project, designed for a development company, locates 576 units of housing on four separate sites. The focus of the project is a continuous green space that connects all units on a particular site. For each site, a pedestrian can travel to all other units or public spaces without ever crossing vehicular circulation. This arrangement enhanced the safety of the complex while ensuring large shared green spaces adjacent to all units. Both the townhouse units and 'flat' units each provide individual access (a 'front door') to the units, creating a sense of ownership and identity for residents.

COST: \$29 million
 ROLE: AJLA was the Design Architect of this project.
 STATUS: Project is pending approval.
